From the PURPOSE section:

- Someone mentioned (Alan?) that this was a cursory CAP inspection and not to imply we surveyed the whole 14 acre site.

From the ACTIVITIES section:

- - I think PRP is now RP (Responsible Parties).

From the OBSERVATION section:

- Val, didn't the calibrated PVC pole go deeper than 6 ft.?
- Area A: Should we make the statement: *the area suspected of lacking rock is approximately 25 sq.*
- Area B+C: Should we make the statement(s): *This observation supports current maps of the site identifying this location as the edge of the cap.*

Maybe use more generic terms and allow the reader to draw their own conclusions. I anticipate this report going will get a lot of attention.

When we have the final draft, I'd suggest having someone (Ashley?) do a peer/format review. Also, to check that the maps and photos match the report references.

All just my two cents. Good job Brandi.

Thanks,
Nick

Subject: SJWP Dive Report Draft - Round 2

Here is the dive report with my edits. Still needs a bit of work. Please review and let me know your suggestions.
